Projects

Footwear (PHP)

- **Project Status :** Work is done

- **Description:** This college project aims to build a dynamic, fully functional e-commerce platform for selling footwear using PHP, MySQL, and other related web technologies. The platform will allow customers to browse different footwear categories (e.g., Men's, Women's, Sports, Formal, Casual), and add products to their cart complete. Admin users can manage products.

This project aims to demonstrate practical skills in web development, PHP and Database management.

- **Key Features:**

For Users:

  - ○ **User Registration and Login:**
    - ■ Users can create an account by providing basic information (full name, email, contact number, password)
    - ■ Secure login/logout functionality with password encryption.

  - ○ **Product Browsing:**
    - ■ Products are displayed in categories (e.g., Men's, Women's, Sports, Casual, etc.).
    - ■ Filters for sorting products by price, size, brand, and color.
    - ■ A search function to allow users to find specific footwear by name, size, or brand.

  - ○ **Product Details Page:**
    - ■ Users can view detailed product information (size, color, material, price, and customer ratings).
    - ■ High-quality images with a zoom-in feature for a detailed view.

  - ○ **Shopping Cart:**
    - ■ Users can add, remove, and update quantities of footwear items in the shopping cart.
    - ■ The cart displays the total price, including taxes and shipping charges.
    - ■ Option to save items for later purchase.

- ○ **Checkout Process:**
  - ■ Users can enter shipping details (address, phone number).
  - ■ Payment option Cash on Delivery (COD).

- ○ **Reviews and Ratings:**
  - ■ Customers can rate and review products based on their experience (1 to 5 stars).
  - ■ Reviews help other users make informed purchasing decisions.

For Admin:

- ○ **Admin Authentication:**
  - ■ Secure admin login page with username and password.

- ○ **Product Management:**
  - ■ Add, edit, or delete footwear products.
  - ■ Update product details (size, brand, price, stock availability).
  - ■ Upload product images and manage product variants (e.g., different colors or sizes).

- ○ **Order Management:**
  - ■ View a list of all customer orders with their status.
  - ■ Change order status (e.g., Pending, Shipped, Delivered, Canceled).
  - ■ View customer contact information and order details.

- ○ **Customer Management:**
  - ■ View a list of registered users, their orders, and account details.
  - ■ Option to deactivate or delete user accounts.

- **Technology Used:**

  - **Frontend:** HTML, CSS, Bootstrap, jQuery, Ajax
  - **Backbend:** PHP
  - **Database:** MySQL
  - **Version Control:** GitHub

- **Responsibilities:**
  - I developed both front-end and back-end using Php.
  - Responsible for creating and implementing features to enhance project functionality.
  - Conducted thorough unit testing to ensure robust performance and reliability.

Lapshop (Laravel)

- **Project Status:** Work in progress

- **Description:** Lapshop Laravel is a comprehensive eCommerce platform designed to cater to all laptop enthusiasts and users. Our mission is to provide an online shopping experience for laptops and related accessories, ensuring customers can easily find, compare, and purchase their desired products.

- **Key Features:**
  - Intuitive navigation and search functionality to help users quickly find laptops based on brand, specifications, price range, and customer reviews.

- Detailed product pages with high-quality images, specifications, user reviews, and comparison tools to assist customers in making informed decisions.

- Customers share their experiences, helping future buyers make informed choices.

- A dedicated support team is available by email and phone to assist with queries, returns, and technical support.

- A fully responsive design to ensure a smooth shopping experience on mobile devices.

- **Technology Used:**

  - **Frontend:** HTML5, CSS3, Bootstrap, jQuery, Ajax
  - **Backend:** Laravel
  - **Database:** MySQL
  - **Version Control:** GitLab

- **Responsibilities:**

  - I developed both front-end and back-end functionalities using Laravel.
  - Responsible for creating and implementing new features to enhance project functionality.
  - Conducted thorough unit testing to ensure robust performance and reliability.
